# Introducing the Most Powerful Simulation Solution for Metal Additive Manufacturing

2018

# Metal Additive Manufacturing

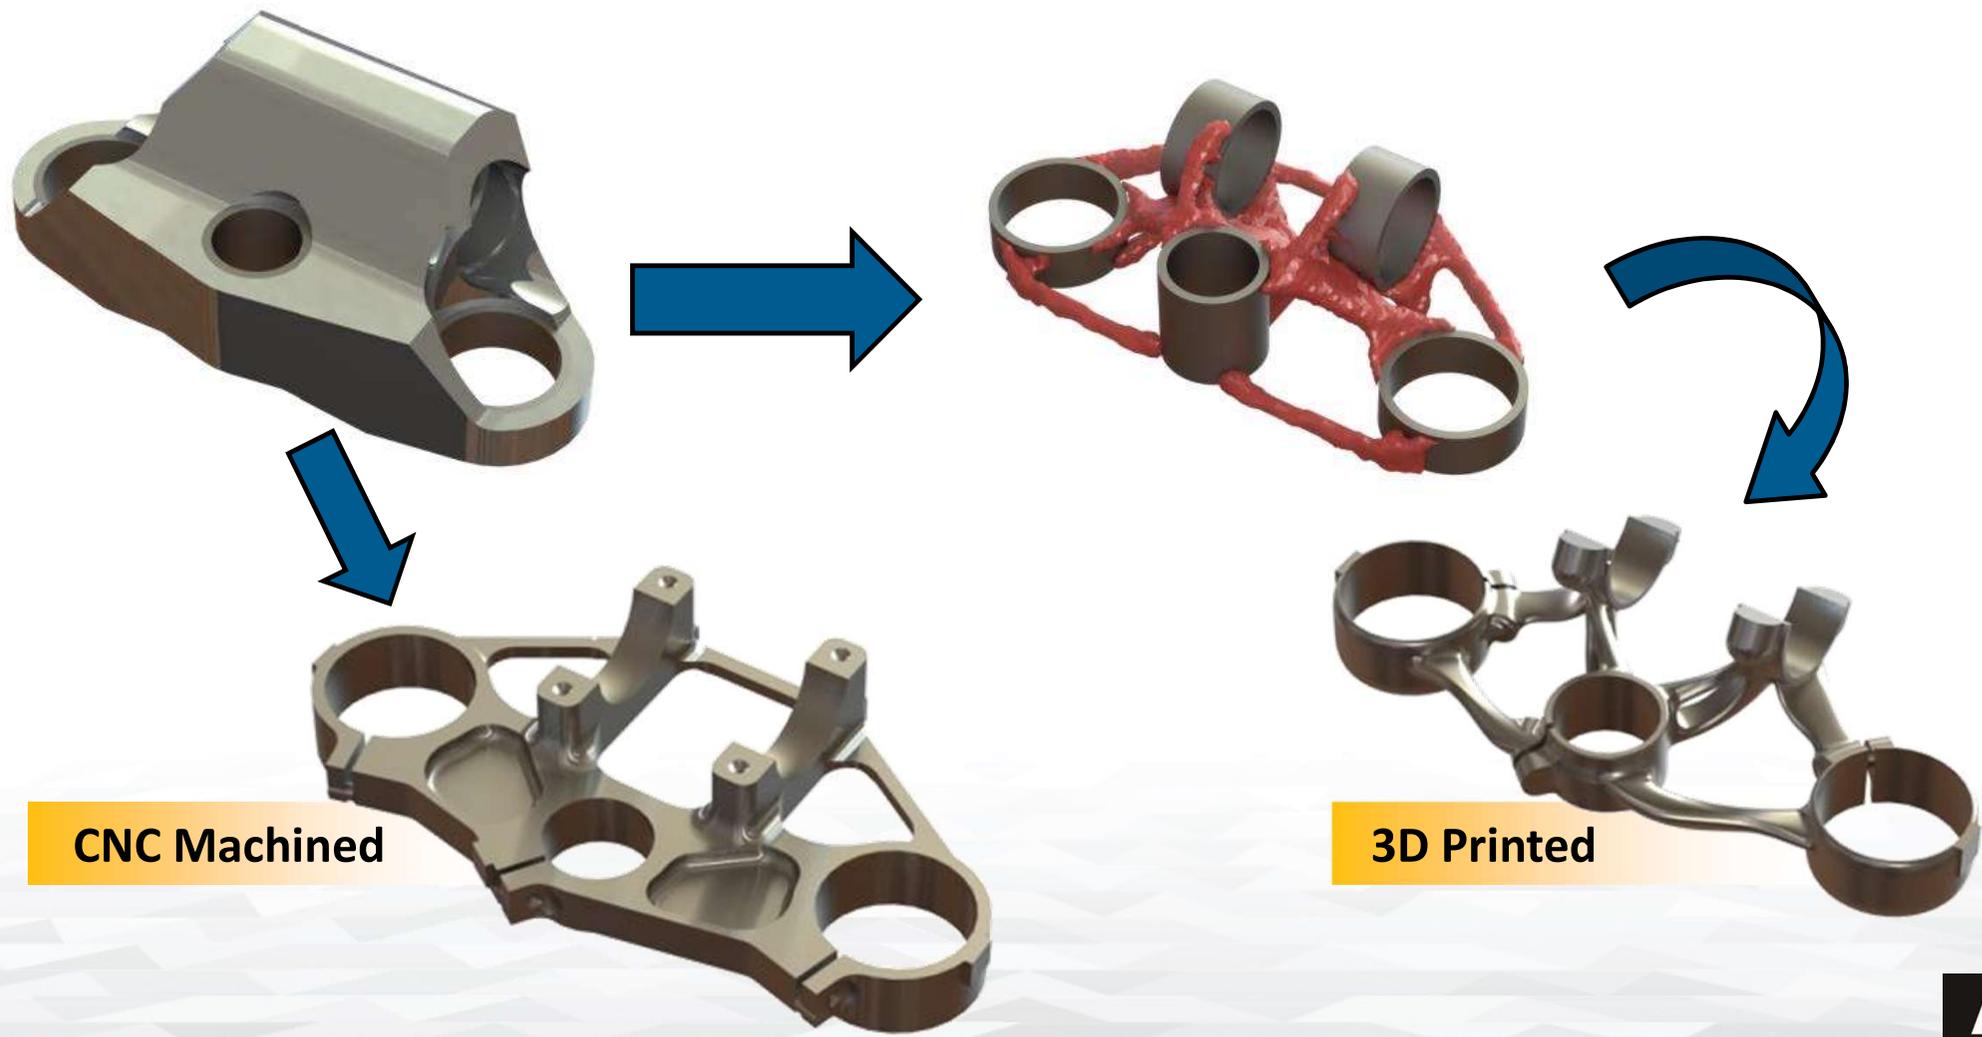

## The AM Promise

- *Impossible to Manufacture*
- Part Consolidation
- Distributed Production
- New Material Properties
- Replacement parts

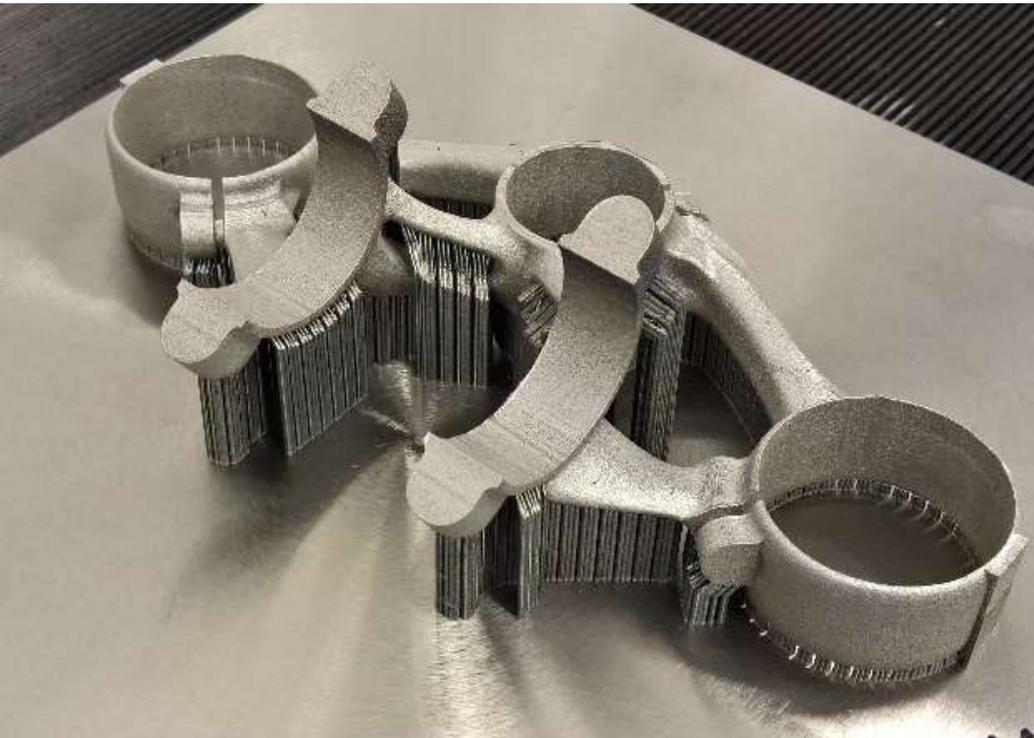

# Topology Optimization is not enough

CNC Machined

# Details matter

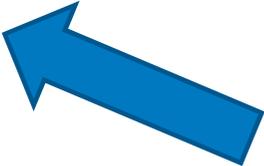

...results in a unique **Thermal History**

Each Machine Manufacturer uses different **Scan Pattern** logic.

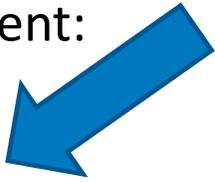

A unique **Scan Pattern**...

Which is why Predicting **Thermal History** at the **Meltpool level** for **Full-Scale** components is critically important!

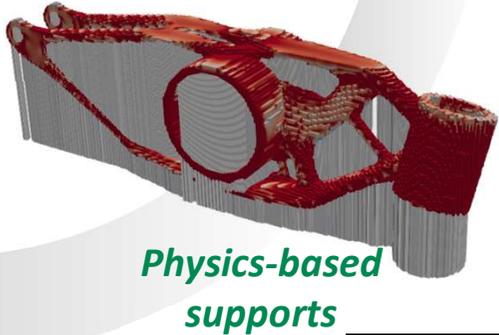

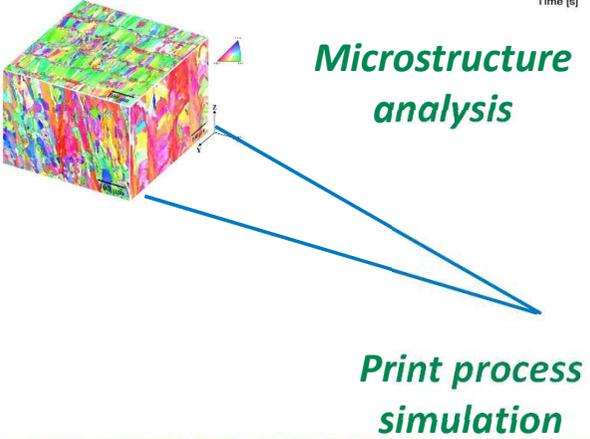

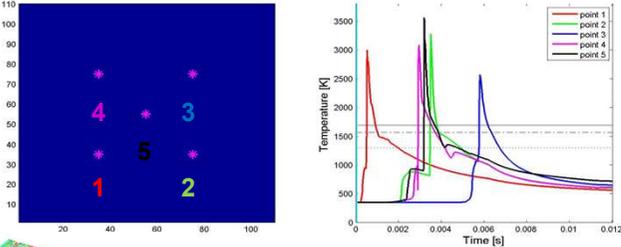

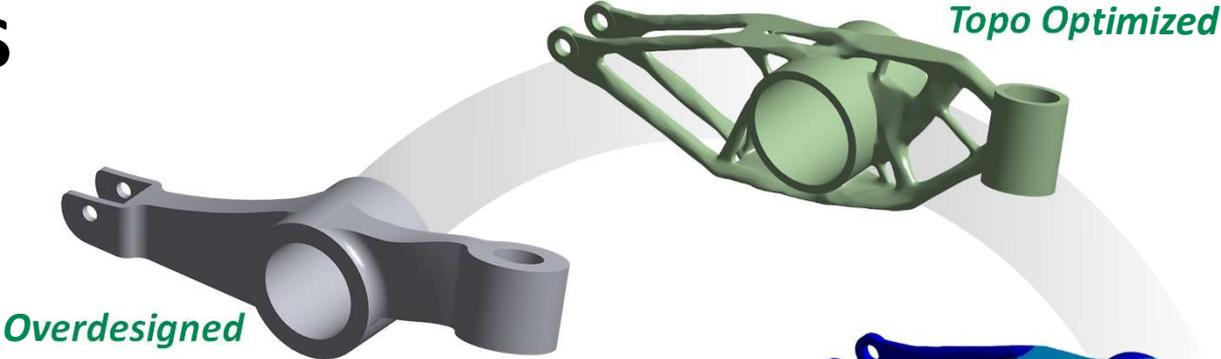

...which results in different:

- Strain Magnitudes
- Defect Distributions
- Microstructures
- Mechanical Properties

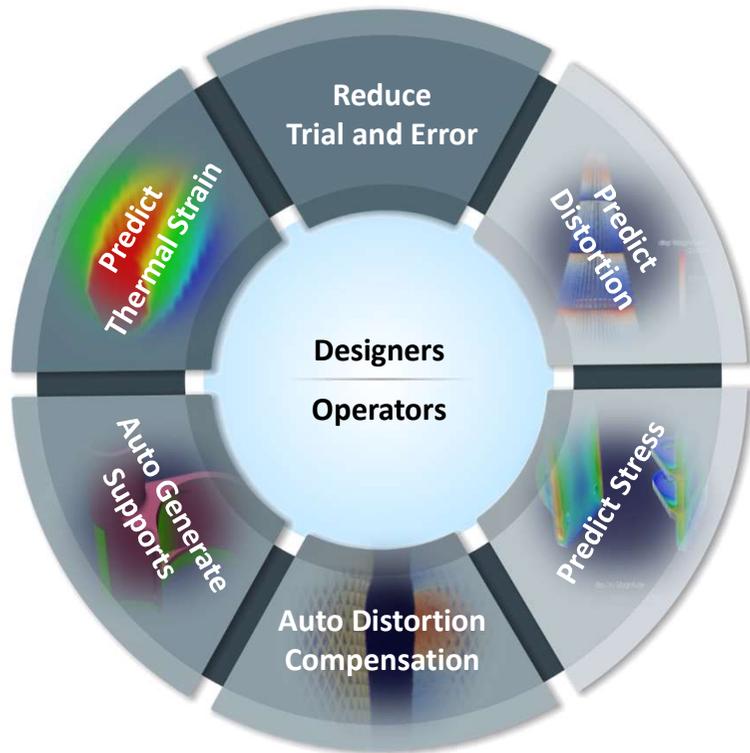

# Design for AM with ANSYS

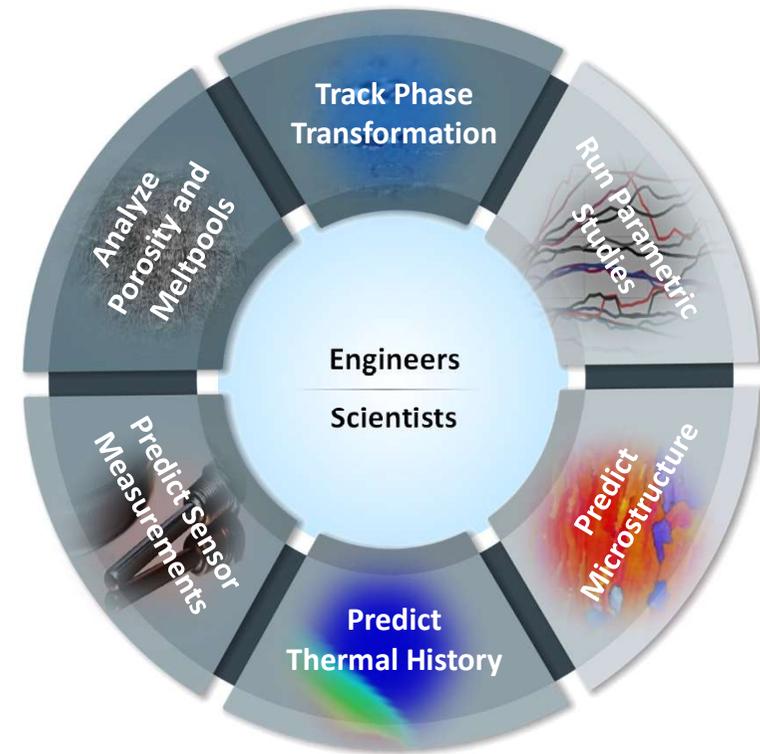

- 1 Complete Design-to-Print Solution
- 2 Increased Confidence without Trial-and-Error
- 3 Truly Successful AM Production

## Different Types of Customer need AM Simulation

- *Designers in aero, defense, automotive, medical, etc.*
- *Metal AM machine operators*
- *Part manufacturing operations managers*

- *FEA analysts in aero, defense, automotive, medical, etc.*
- *Owners of "part qualification" within OEMs*
- *Materials/manufacturing researchers*

## ***ANSYS Additive Print***

**Lightweight, Standalone application**

**Delivered outside of Workbench**

- **Desktop and Cloud availability**

**Includes SpaceClaim**

**Targeted at Designers and Machine Operators**

**Predict build quality, part distortion, reduce build failures...  
maximize productivity of your AM machine**

## **ANSYS Additive Suite**

### Includes All ANSYS AM capabilities

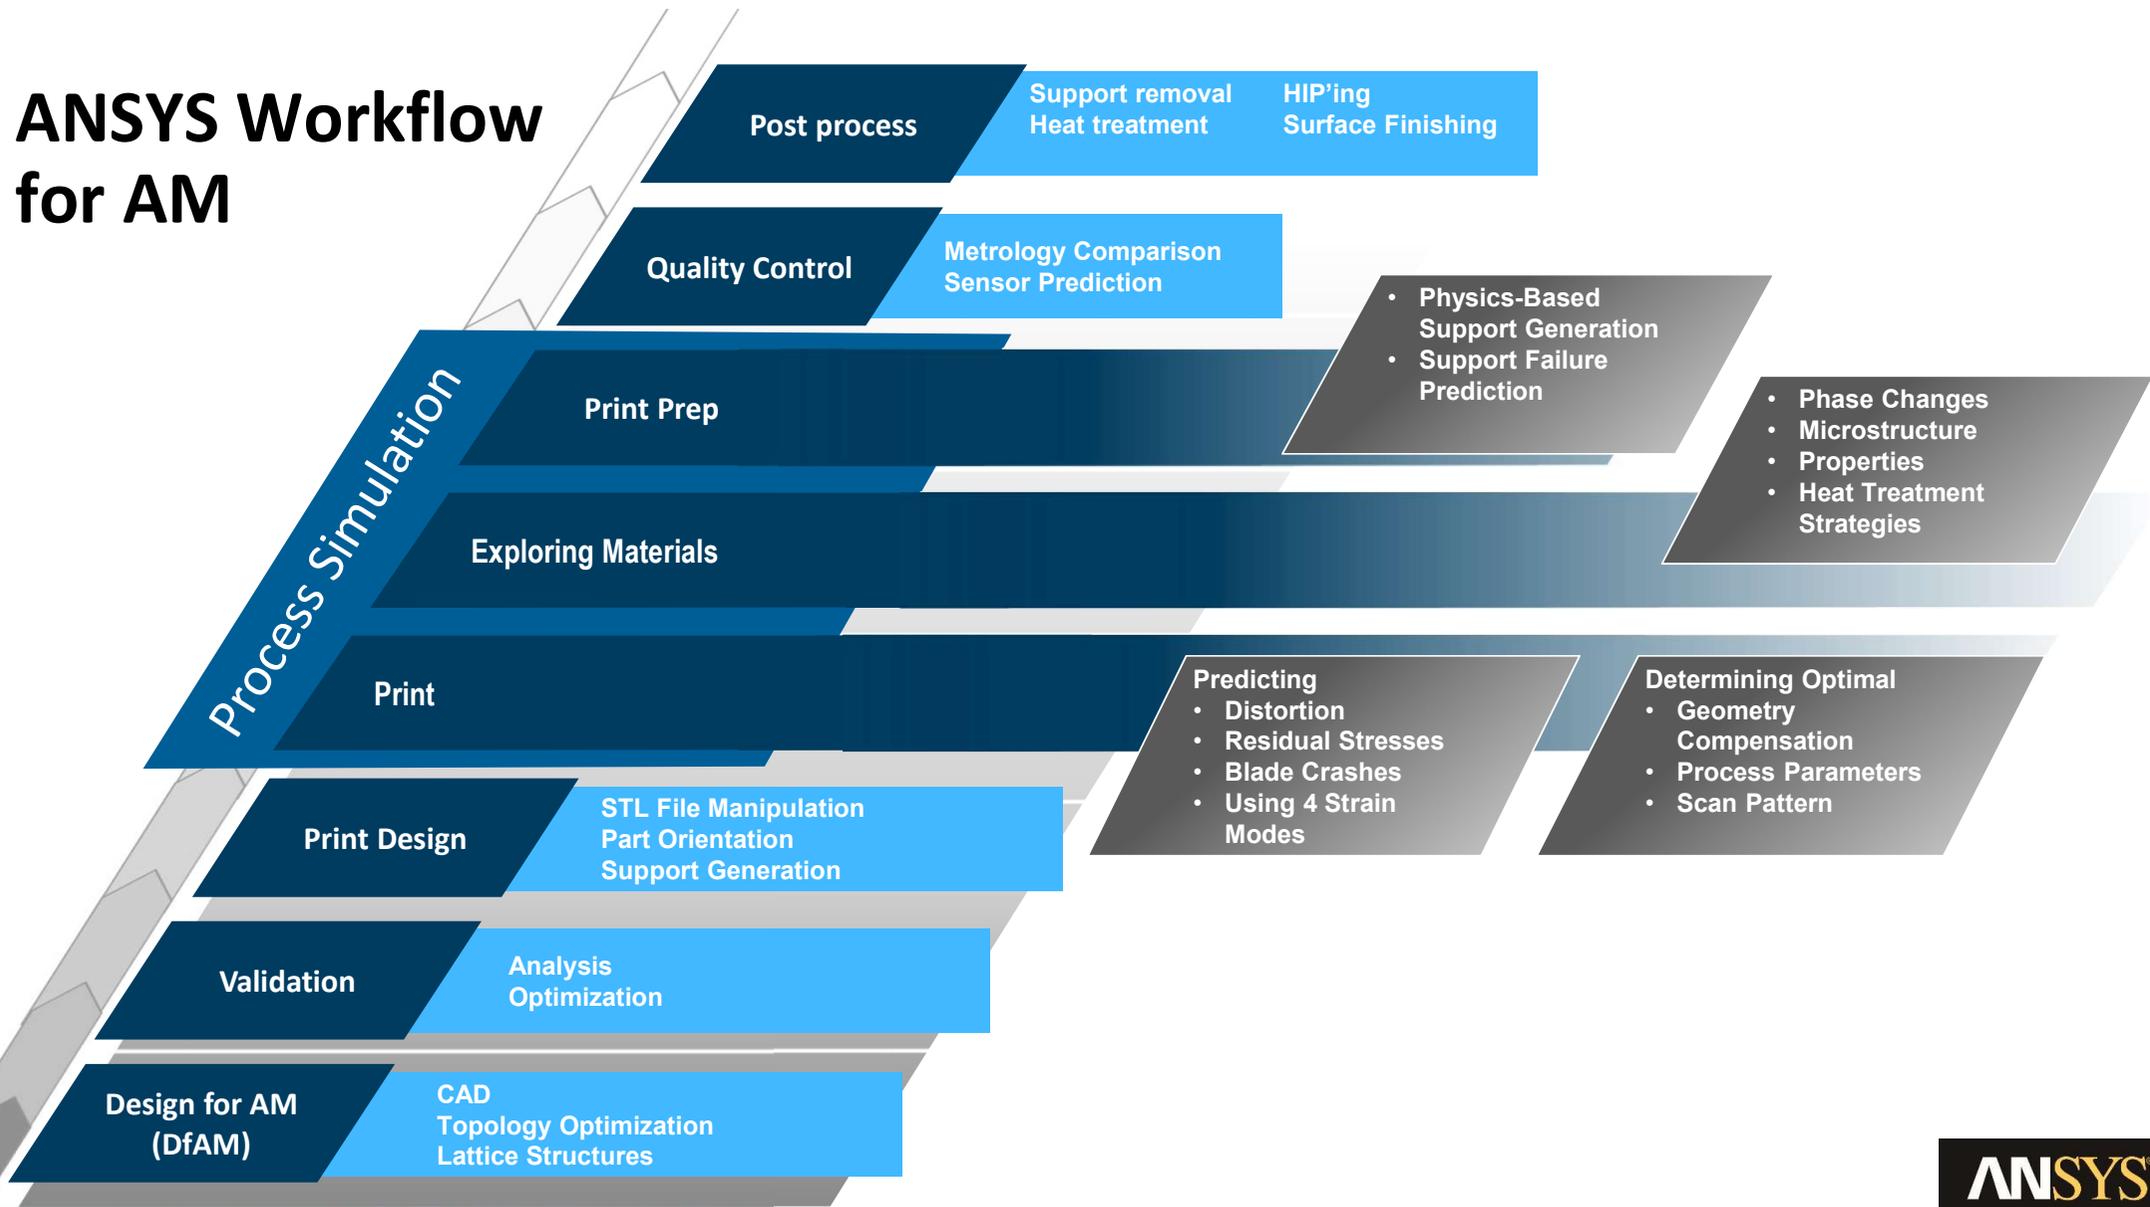

- ANSYS Workbench & Mechanical Enterprise Additive Capabilities
  - Process Simulation
  - Topological Optimization
  - Lattice Optimization
- Additive Science
  - Scan-vector-level thermal analysis
  - In-depth material behavior
- Additive Print

FEA analysts, AM experts and material researchers

Industry leading analysis tool for AM processes and materials

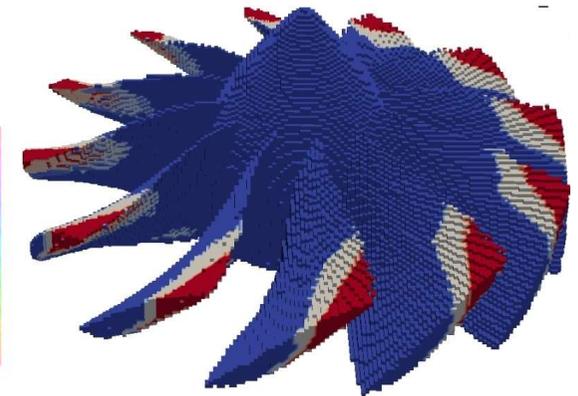

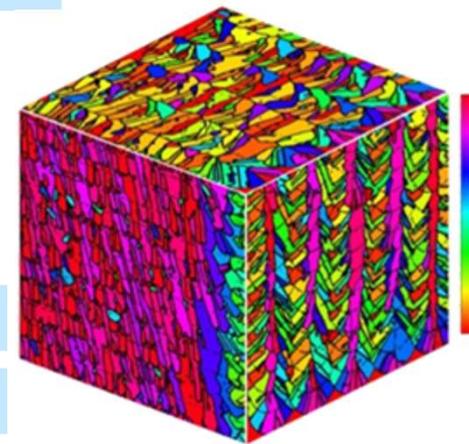

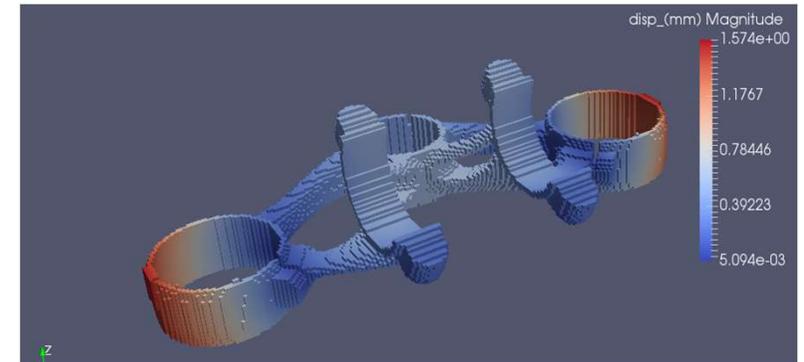

# ANSYS Workflow for AM

# Features of ANSYS AM Suite

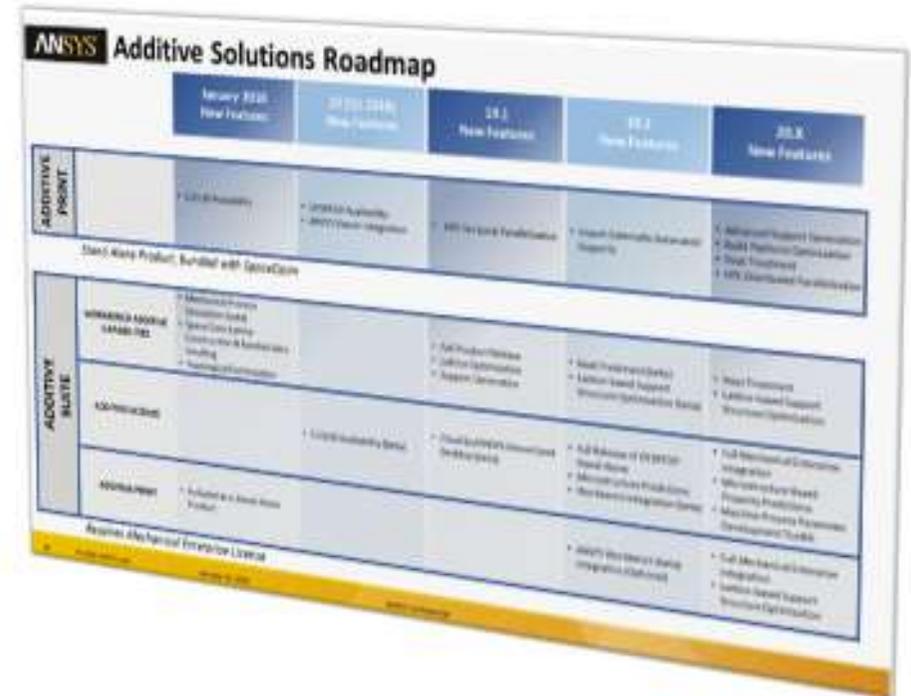

- Options for Simplified Thermal Analysis AND Detailed Thermal Analysis
- Topology / Lattice Optimization
- Distortion / Residual Stress / Failure Prediction
- Automatically Compensate Geometry for Distortion
- Four Strain Mode Options
- STL File Repair / Manipulation
- Location-Specific Microstructure Output
- Geometry-based Support Generation
- Physics-based Support Generation
- Porosity Predictions
- Simulate using Machine Scan-Vectors
- Thermal Sensor predictions

ANSYS®

# ANSYS is Committed to AM

- Actively Investing in new AM Capabilities
- Aggressive Roadmap for future development
- Partners with a strong ecosystem
  - Machine manufacturers
  - Materials Suppliers
  - Parts Producers
  - Universities
  - Research Labs
